

TELE-ICU SERVICES

Why Use Telemedicine in the ICU?

A pioneer in inpatient telemedicine, we have devoted more than eight years to perfecting proprietary telemedicine models of care, and adapting them to meet your evolving needs. Eagle Telemedicine is helping our partner hospitals nationwide eliminate locum support costs, prevent burnout, manage specialty gaps, and reduce unnecessary transfers.

THE CHALLENGE

Due to the growing physician shortage and the high cost of retaining staff, ICUs across the nation are struggling. Estimates predict a shortfall of 30% of the needed intensivist workforce and the cost of fully staffing an ICU can add up to over \$1.2 million. These staffing challenges are causing 42% of hospitals in the U.S. to fall below Leapfrog ICU Physician Staffing standards. Implementing Leapfrog IPS standards could prevent up to 55,000 ICU deaths per year.

THE SOLUTION

With more than 5 million patients treated in ICUs each year and the increasing shortage of qualified ICU intensivists, our telemedicine program offers help to hospitals. Eagle Telemedicine's ICU intensivists do proactive **Eagle Eye Rounding™** with ICU nurses, where teams assess, triage and institute early treatment in patients who experienced an acute decline in their clinical status. Our telemedicine intensivists can run an ICU, handling everything from floor call to attending rapid responses and running codes.

THE BENEFITS

- Provide 24/7 access to expert intensivists
- Improve compliance with Leapfrog IPS standards
- Reduce unnecessary transfers
- Increase patient volume
- Maximize ROI with incremental DRG reimbursement

GROWING SUCCESS IN TELEMEDICINE SPECIALTIES
